GIS PROFESSIONAL SERVICES

ArcGIS Enterprise | ArcGIS Utility Network |
GIS Mobile Field Applications | GIS Project Management

Weston & Sampson offers a full range of Geographic Information System (GIS) services. With more than 28 years of experience providing comprehensive, cost-effective solutions for our client's geospatial data management needs, Weston & Sampson is ready to assess, address, implement, and execute on full project scopes including:

- GPS asset locating services
- Record digitization/data conversion
- Infrastructure modeling
- Application development
- Mobile data platforms
- Cloud based solutions
- Hardware / Software acquisition
- Database management
- Facilities management planning
- Technical support and training

Our expertise as a comprehensive service provider combined with our status as an Esri business partner uniquely positions Weston & Sampson to maximize return on the most advanced industry software available. Our ability to provide full GIS implementation services allows Weston & Sampson to provide customized data management tools applicable to a wide range of users and datasets from single user deployments to enterprise level integration.

Our field data collection platform iDataCollect streamlines the field data collection process by replacing paper forms and associated workflows. Operations data collected with iDataCollect can be directly integrated with GIS providing decisionmakers near real-time access to the data they need in a common interface.

A full service engineering firm with more than a century of experience, Weston & Sampson is helping Esri clients leverage the power of GIS to manage and maintain their infrastructure. A comprehensive understanding of Esri's product line allows Weston & Sampson to tailor a solution to a client's specific needs or to work with their existing deployment and facilitate cost effective results. Weston & Sampson offers a full range of GIS services including needs assessments, project management services, scanning and data conversion, hardware and software acquisition, applications development, web-based GIS, training and technical support, and facilities management planning. Weston & Sampson has specializations in water, sewer, electric, gas, AEC, and municipal clients. We develop innovative GIS solutions for environmental issues that offers our clients a dynamic knowledgeable partner in development.

SERVICES

- Data Model & Database Design
- ArcGIS Utility Network Migration
- GIS Project Management
- GIS Field Mobile Application Development
- GIS System Integration and platform upgrades
- Asset Management
- GIS Enterprise system performance testing

MARKETS SERVED

- Electric
- Gas
- Water
- Telecom
- AEC for Airports
